Space Euphoria: Do Our Brains Change When We Travel in Outer Space?

'After decades of study and contemplation about his experience, Ed Mitchell believes that the feeling of "oneness" with the Universe that he and others have experienced is a consequence of little understood quantum physics. In a recent interview with writer Diana deRegnier of American Chronicle, Mitchell explains how the event changed his life and his entire perspective on the world and how each of us fits into the grand scale of the cosmos.'
