Your DNA Is a Song: Scientists Use Music to Code Proteins

'What are proteins? How are they structured? What's the difference between a protein in a human and the same protein in a lizard? Ask Mary Anne Clark these questions and she is likely to respond with an earful of music. Clark is a biologist at Texas Wesleyan University in Fort Worth, and she's part of a growing field of science educators who use so-called protein music to help illustrate the basic structure of the building blocks of life.'
