Chemtrails, UFOs and jets in a line of four over Hull East Yorkshire, UK.
Sent in by Lee

David, after seeing lots of information on your site concerning chemtrails I thought your readers might also be interested in my observations.

If anyone would care to look up on the odd occasion, they would notice some very strange events taking place over Hull East Yorkshire. Several times a week, especially when the sky is clear and blue, dozens of jet airliners criss- cross the sky leaving the unmistakable signature of white line chemtrails. I have noticed on some occasions the chemtrails coming from the jet suddenly stop for a while and then start again as the airliner moves further away, almost as if they are changing tanks? I have also seen four airliners in a line, flying side by side directly over Hull, creating four chemtrails all at once.

None of these chemtrails ever seem to dissipate, but just hang in the sky all day, gradually spreading out into strange looking linear clouds. At the beginning of March, 2006, I had the opportunity to observe the usual chemtrail activity on a bright, clear sunny day, when I suddenly noticed a bright shiny disc off to the north-west hanging in the sky, it looked like a very bright star, because it didnâ€™t move.

Later in the afternoon on the same day, when the sky was full of chemtrails, I noticed two more shiny discs to the north at approximately the same height as the jets flight path, 30-35 thousand feet, I observed them moving slowly around each other in an anti-clockwise direction, I gradually lost sight of them as they became obscured by cloud. I have seen photos of the same type of shiny discs on the internet, so I know they are elsewhere, and of course photos of chemtrails abound. I wonder if we will ever know the truth about chemtrails, or UFOs for that matter?

I wish you all the best David, your doing a fantastic job. Thanks Lee
